## 1. System Overview

The Nuvation Energy Low-Voltage BMS is a complete Battery Management System that provides cell balancing and charge management for virtually any battery chemistry using a Low-Voltage BMS. The Low-Voltage BMS is designed for input voltage of 11–60 V DC. It can manage up to 12 or 16 battery cells in series and can be expanded to manage additional cells with a Nuvation Energy Cell Interface module.

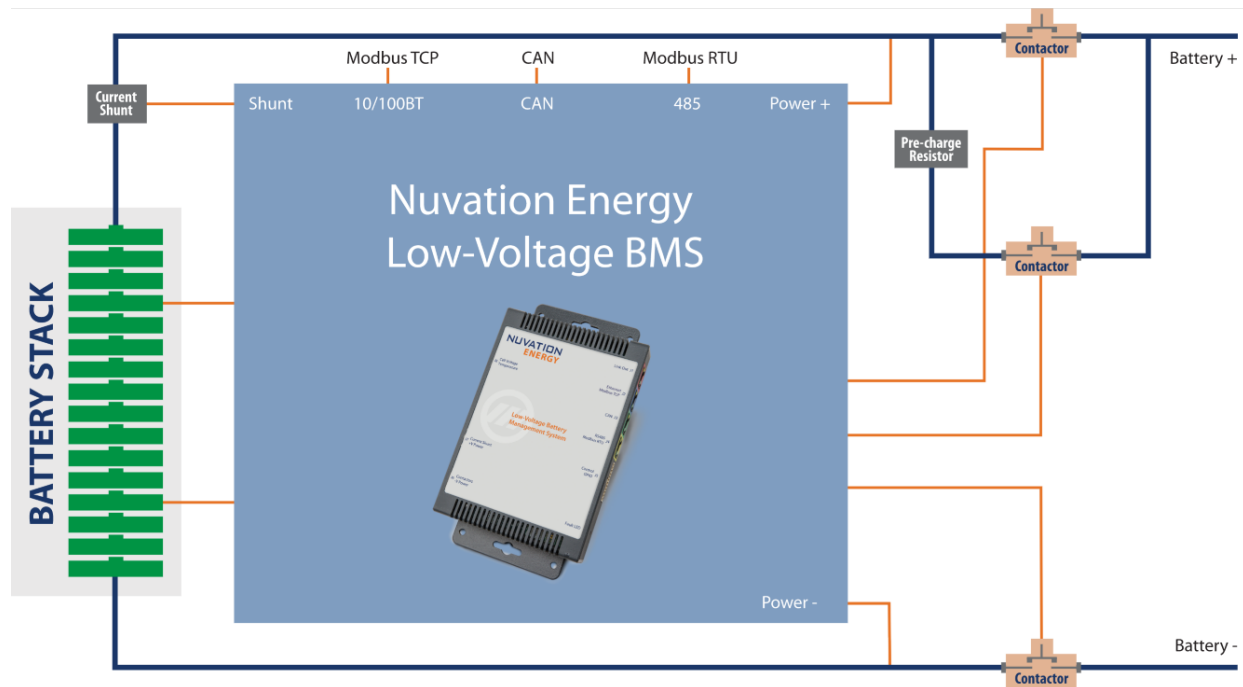

The input voltage range of 11–60 V DC applies with or without a Cell Interface expansion module.

Available modules are listed below.

**Table 1. Low-Voltage BMS Modules**

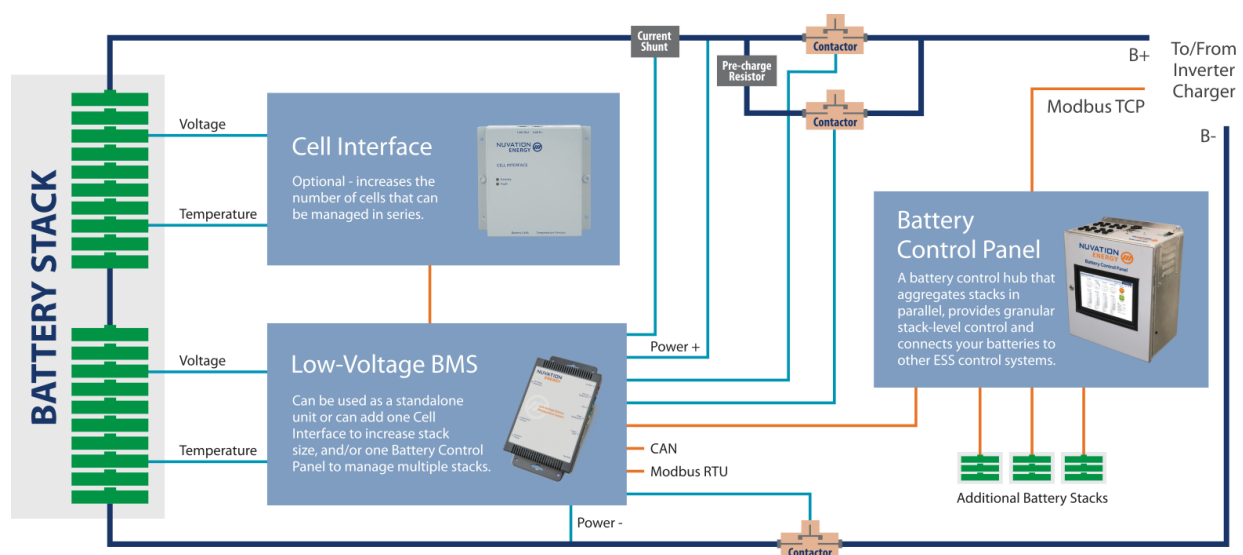

Model	Module Name
NUV300-BC-12-NC	Low-Voltage BMS - 12 channel, no CAN
NUV300-BC-16-NC	Low-Voltage BMS - 16 channel, no CAN
NUV300-BC-12	Low-Voltage BMS - 12 channel
NUV300-BC-16	Low-Voltage BMS - 16 channel
<b>Expansion Module</b>	
NUV100-CI-12-1	Cell Interface - 12 channel
NUV100-CI-16-1	Cell Interface - 16 channel

An example single-stack system with a 12 or 16 channel configuration is shown in [Figure 1, “Nuvation Energy Low-Voltage BMS Single-Stack System Overview”](#). This configuration requires a single Low-Voltage BMS.

**Figure 1. Nuvation Energy Low-Voltage BMS Single-Stack System Overview**

An example multi-stack system with a 24-channel configuration is shown in [Figure 2, “Nuvation Energy Low-Voltage BMS 24-channel, Multi-stack System Overview”](#). This configuration requires a Low-Voltage BMS and a Cell Interface expansion module.

**Figure 2. Nuvation Energy Low-Voltage BMS 24-channel, Multi-stack System Overview**

## 1.1. Low-Voltage BMS

The Low-Voltage BMS contains analog-to-digital measurement circuitry which reads cell voltage, current, and temperature values. It also contains processing capability and software to support decision making and allow it to operate as a stand-alone Nuvation Energy Low-Voltage BMS.

The Low-Voltage BMS is available in the following variants:

1. The NUV300-BC-12-NC which can monitor up to 12 voltage channels (no CAN support)
2. The NUV300-BC-16-NC which can monitor up to 16 voltage channels (no CAN support)
3. The NUV300-BC-12 which can monitor up to 12 voltage channels (includes CAN support)
4. The NUV300-BC-16 which can monitor up to 16 voltage channels (includes CAN support)

**Figure 3. Nuvation Energy Low-Voltage BMS Module**

The external interfaces to this module are:

- Cell voltage and temperature sense connector
- Current shunt connector
- 4 contactor coil driver outputs
- 4 optically isolated digital inputs
- 4 optically isolated digital outputs
- 10/100 Base-T Ethernet port (Modbus-TCP)
- Isolated CAN 2.0 port (not available in no-CAN variants (\*-NC))
- Isolated RS-485 (Modbus-RTU) port
- Expansion interface connector for additional Cell Interface modules
- Fault and communication indicator LEDs

## 1.2. Cell Interface

The Nuvation Energy Cell Interface is the direct link between the individual battery stack cells and the rest of the Battery Management System. It facilitates battery monitoring and balancing functionalities.

In a Low-Voltage BMS, a larger battery stack can be accommodated with the addition of one or more Cell Interface modules, provided the total stack voltage does not exceed maximum rating of the default configuration. When coupled with a Low-Voltage BMS, the Cell Interface model must match the Low-Voltage BMS model—i.e. A Low-Voltage BMS - 12 channel can only be coupled with a Cell Interface - 12 channel, and a Low-Voltage BMS - 16 channel can only be coupled with a Cell Interface - 16 channel. The firmware does not support a mixed chain of different Cell Interface variants.

The following are variants of the Nuvation Energy Cell Interface:

- The NUV100-CI-12-1, Cell Interface - 12 channel can monitor up to 12 series-connected cells
- The NUV100-CI-16-1, Cell Interface - 16 channel can monitor up to 16 series-connected cells

**Figure 4. Nuvation Energy Cell Interface Module**

The external interfaces to this module are:

- Battery cells connector
- Temperature sensors connector
- 2 Link Bus connectors
- 2 Indicator LEDs

## 2. Operating Limits

### 2.1. Low-Voltage BMS

Exceeding the maximum ratings will damage the Low-Voltage BMS module.

While Low-Voltage BMS is designed for an input voltage of 11–60 V DC, testing has confirmed that the unit experiences no degradation when using an input voltage up to 68 V DC. However, for applications that exceed 60 V DC, please consider Nuvation Energy High-Voltage BMS or contact [support@nuvationenergy.com](mailto:support@nuvationenergy.com).

The +VPOWER input current depending on the loads the Low-Voltage BMS is driving. Without contactors, the Low-Voltage BMS draws approximately 70 mA at 48 V DC. With all contactors connected and energized, it can draw up to 1.25 A at 48 V DC.

Nuvation Energy BMS does not include an internal free-wheeling protection diode on contactor coil-driver circuits, as it has been found to cause premature contactor failure.

## 2.1.2. Environmental Conditions

Symbol	Parameter	Min	Typ	Max	Units
<b>Thermal Specifications</b>					
Ta	Operating Temperature	-40	25	50	°C
	Storage Temperature	-40	25	50	°C
<b>Humidity Specifications</b>					
RH	Operational RH	5	-	85	%
	Storage RH	5	-	85	%
<b>Shock and Vibration Specifications</b>					
Vertical	Vertical shock/vibration	-	-	10	m/s <sup>2</sup>
Longitudinal	Longitudinal shock/vibration	-	-	10	m/s <sup>2</sup>
Transverse	Transverse shock/vibration	-	-	10	m/s <sup>2</sup>
Pulse vibration	On each axis	-	-	245	m/s <sup>2</sup>

The Low-Voltage BMS has been designed to meet the requirements of SAE J2464 (shock) and SAE J2380 (random vibration).

## 2.1.3. Standards and Certifications

The Low-Voltage BMS is designed to comply with industry EMC standards for FCC and IC Class A, and European EN55032 Class A. It is designed for EMI and ESD performance to EN55024, including the IEC/EN 61000-4-X series of tests. All components are EU RoHS / China RoHS compliant.

<b>Standard/Certification</b>		
Stationary Battery Safety	UL Recognized	UL 1973 (file no. MH64071)
Functional Safety	UL Recognized	UL 991 (file no. MH64071) UL 1998 (file no. MH64071)

UL 1973 recognition ensures safe battery operation and significantly reduce the effort of certifying the energy storage solution to meet UL 1973 and UL 9540.

## 2.2. Cell Interface

Exceeding the maximum ratings will damage the Cell Interface module.

When using a Cell Interface expansion module, please ensure the total maximum stack voltage does not exceed 60 V DC.

## 3. Mechanical Overview

### 3.1. Low-Voltage BMS

The overall dimensions of the Low-Voltage BMS are 220 mm × 125 mm × 30 mm.

Extra space should be provided around the module to allow for sufficient heat dissipation, and cable installation.

The Low-Voltage BMS should be securely mounted in a vertical orientation, in an environment that permits free movement of air through all ventilation slots for convection cooling. The *Battery Cells and Temperature Sensor* connector should be facing up or to the left. If this is to be used with a battery chemistry such as lead-acid—which does not require balancing—the Low-Voltage BMS may be mounted horizontally, with the ventilation slots oriented upwards.

It is not advisable to mount the Low-Voltage BMS on the underside of a horizontal surface.

The Low-Voltage BMS weighs approximately 400 g.

All dimensions in mm [in]

**Figure 5. Mechanical Drawing of Low-Voltage BMS**

## 3.2. Cell Interface

The overall dimensions of the Cell Interface are 104.4 mm × 121.58 mm × 40.6 mm. The standard Cell Interface (i.e. with bulkhead) weighs approximately 450 g.

The Cell Interface is available in a bulkhead-mountable enclosure as shown in [Figure 6, “Mechanical Drawing of Cell Interface with Bulkhead Enclosure”](#). The enclosure has five metal walls, leaving the back of the unit fully exposed.

It must be mounted to a metal bulkhead panel such that the panel covers the exposed back.

The NUV100-CI-12-1 and NUV100-CI-16-1 variants produce up to 24 W and 32 W, respectively, during cell balancing. A portion of this heat is transferred to the bulkhead.

Extra space should be provided around the module to allow for sufficient heat dissipation, and cable installation.

**Figure 6. Mechanical Drawing of Cell Interface with Bulkhead Enclosure**

### 3.2.1. Optional DIN rail mounting Kit

For applications requiring DIN rail mounting, the Cell Interface may be ordered with the Cell Interface Mounting Bracket (Bulkhead-to-DIN) kit. This kit is sold separately, and includes a metal plate and the necessary hardware to securely mount the standard Cell Interface (i.e. with bulkhead enclosure) to EN50022-compliant DIN rails, as shown in [Figure 7, “Mechanical Drawing of Cell Interface with Cell](#)

## Interface Mounting Bracket (Bulkhead-to-DIN)™.

The Mounting Bracket kit assembly adds an extra 14.2 mm to the overall width of the Cell Interface module, bringing it from 104.4 mm to 118.6 mm. The kit assembly holds the module approximately 7 mm away from the inside lip of the DIN rail.

The Mounting Bracket offsets the Cell Interface module from the center of the DIN rail approximately 30 mm upwards as shown in [Figure 7, “Mechanical Drawing of Cell Interface with Cell Interface Mounting Bracket \(Bulkhead-to-DIN\)”](#).

A Cell Interface with the Mounting Bracket weighs approximately 540 g.

**Figure 7. Mechanical Drawing of Cell Interface with Cell Interface Mounting Bracket (Bulkhead-to-DIN)**
